About the Project

Reporting a civic issue in India is still hard. Citizens face four problems:

- **Language barrier:** most portals expect English or formal Hindi.
- **Unclear routing:** people do not know which body, ward or department owns the issue.
- **Duplicate reports:** the same problem is filed again and again.
- **No proof of repair:** complaints are closed without citizen verification.

CivicSaathi AI solves these with one platform. A citizen describes the problem in their own language, by text or voice. The AI understands it, detects the category, and routes it to the correct municipal body and ward. The citizen then tracks it with a private Complaint ID and PIN, and verifies the repair.

Key Features

Feature	What it does
Multilingual input	Hindi, Hinglish, English, Marathi, Punjabi, Tamil, Bengali and Telugu
Voice and text	Record your voice or type the complaint
AI category triage	Auto-detects the category from 12 verified civic categories
Smart ward routing	Confirms the municipal body, ward, sector and civic helpline
Duplicate detection	Groups similar complaints in the same neighbourhood
Public complaint feed	Shows status: Pending, In Progress, Escalated, Resolved
Private tracking	Complaint ID plus 4-digit PIN, with SLA deadlines
Citizen verification	Verify the repair after resolution (before and after check)
Officer console	Google Sign-In, role-based access, department queues, SLA analytics
AskSaathi assistant	AI chat helper in English, Hindi and Hinglish
Accessibility	English/हिन्दी toggle and adjustable text size

Screenshots

1. Home Page

Clear entry point with live counters (registered, resolved, compliance, ULBs and wards).

Home

2. Public Complaint Feed

Every complaint shows its department, ID and status. Duplicates are grouped, and resolved cases have a **Verify** button.

Complaint feed

3. File a Complaint and Smart Ward Routing

Choose a language, describe the issue, then select the city and sector. The app verifies the municipal authority, ward and helpline.

File and route

4. Private Complaint Tracker

Enter the Complaint ID and secret PIN to see status history, SLA deadlines and repair verification.

Tracker

5. Officer and Admin Console

Authenticated access for municipal officers with role-based access control.

Officer console

6. AskSaathi AI Assistant

Quick actions for reporting, checking status, finding the nearest office and the helpline.

AskSaathi

How It Works

```
Citizen describes issue (voice or text, in any of 8 languages)
        |
        v
Step 1: Describe & Locate   -> language, city, municipal body, sector, optional photo
        |
        v
Step 2: AI Review & Confirm -> category detected, department and ward previewed
        |
        v
Step 3: Tracking ID & PIN   -> complaint registered, ID and 4-digit PIN issued
        |
        v
Officer console             -> queue, assignment, SLA tracking
        |
        v
Citizen verifies the repair -> complaint closed
```

Supported Cities and Languages

Cities (7): Chandigarh (MCC), Gurugram (MCG), Faridabad (MCF), Panchkula (MCP), Jaipur (JMC), Udaipur (UMC), New Delhi (MCD)

Languages (8): Hindi, Hinglish, English, Marathi, Punjabi, Tamil, Bengali, Telugu

Categories (12): Water, Drainage/Sewage, Roads, Sanitation, Streetlights, Electricity, Parks and Trees, Encroachment, Stray Animals/Cattle, Fogging/Health, Safety, General

Installation and Setup

Prerequisites

- Node.js version 18 or higher (check with `node -v`)
- npm (comes with Node.js)
- A free **Gemini API key** from Google AI Studio

Step 1: Get the code

```
git clone https://github.com/<your-username>/<your-repo-name>.git
cd <your-repo-name>
```

> Replace `<your-username>` and `<your-repo-name>` with your own GitHub details.

Step 2: Install dependencies

```
npm install
```

Step 3: Add your API key

Create a file named `.env.local` in the project root folder and add:

```
GEMINI_API_KEY=your_api_key_here
```

If your project also uses Google Sign-In or a database for the officer console, add those keys to the same file.

> Never commit `.env.local` to GitHub. Make sure it is listed in `.gitignore`.

Step 4: Run the app

```
npm run dev
```

Open the local address shown in the terminal (usually `http://localhost:3000` or `http://localhost:5173`).

Step 5: Build for production (optional)

```
npm run build
npm run preview
```

Troubleshooting

Problem	Fix
"Unable to connect to AskSaathi"	Check that `GEMINI_API_KEY` is set correctly, then restart the dev server
`npm install` fails	Update Node.js to version 18 or higher and try again
Voice recording does not work	Allow microphone access in the browser. Use Chrome or Edge
Port already in use	Stop the other app, or run on another port

How to Use the App

As a citizen

1. Open the home page and click **Submit a Citizen Grievance**.
2. Pick your language and describe the problem by typing or clicking **Record Voice**. You can also click **Insert Sample Phrase** to try it.
3. Select your city, municipal body and sector. Check the verified ward and helpline.
4. Leave the category on **Auto-detect via AI Triage**, or choose one. Optionally attach a street photo.
5. Click **Analyze & Preview Department Routing**, review the AI summary and confirm.
6. Save your **Complaint ID** and **4-digit PIN**.
7. Open **Track Complaint**, enter both, and click **Check Status**.
8. When the issue is fixed, verify the repair.

As a municipal officer

1. Open **Officer Dashboard**.
2. Sign in with Google.
3. Manage your department queue and monitor SLA analytics.

Try the demo tickets: on the tracking page, click any sample ticket such as `CS-CHD-2026-1007` (In Progress) or `CS-JAI-2026-1009` (Resolved).

Privacy and Security

- Complaint details are private. Tracking needs both the Complaint ID and the secret PIN.

- PINs are protected with salted SHA-256 hashing.
- Officer access uses Google Sign-In with role-based access control.
- In an emergency, call **112**.

Roadmap

- [x] Working prototype with 8 languages and 7 cities
- [x] AI triage, ward routing, tracker, officer console and AskSaathi
- [ ] Live links to real municipal grievance portals and helplines
- [ ] WhatsApp and Telegram bot with Bhashini voice models
- [ ] Open-source release and independent security review
- [ ] More cities, wards and languages

Disclaimer

CivicSaathi AI is a prototype built for a hackathon. Complaints submitted here are stored in the app database for demonstration purposes only. Sample records are fictional, and routing uses configurable local ward rules, not live government portals.

This Project Is Made by the Use Of Google AI Studio
